

VOLDEBUG AI

School Monetization Action Plan

A 90-day, board-ready roadmap to grow per-school ARPU by 3-5x without onboarding a single new client.

Prepared for	Voldebug AI Education Portal
Owner	Meet (meet@voldebug.in)
Date	23 April 2026
Plan window	April 2026 - July 2026 (12 weeks)
Live deployment	https://aischool.voldebug.com

Confidential. Internal strategy document.

1. Executive Summary

Voldebug AI is live with a complete student / teacher / principal / admin portal at aischool.voldebug.com. The platform's differentiator - real-time AI misuse detection (the only credible answer to 'are kids cheating with ChatGPT?') - is in production. Three pricing tiers (Rs.500 / Rs.1,200 / Rs.2,000 per student per year) are defined.

This document is the 12-week action plan to materially increase average revenue per school (ARPU) through a combination of new pricing tier upsells, per-student add-on modules, per-teacher services, metered usage, and adjacent revenue lines.

ARPU targets

School profile	Today (Starter / Premier)	After this plan	Multiplier
Tier-2 private school - 300 students	Rs.3.6 lakh / year (Starter)	Rs.15 lakh / year	4.2x
Tier-1 private school - 1,000 students	Rs.12 lakh / year (Premier)	Rs.50 lakh / year	4.2x
School chain - 5,000 students	Rs.60 lakh / year (Premier)	Rs.2.0 crore / year	3.3x

Revenue thesis: Voldebug already has two assets most edtechs lack - (a) a faculty arm that physically visits schools, and (b) live AI integrity detection in production. Both are services-led, high-margin, and sticky. The plan therefore prioritises productising those advantages rather than competing on volume with Khan Academy.

2. Pricing Tiers - Existing + Proposed Elite

Three tiers exist today. Adding a fourth Voldebug Elite tier (Rs.3,500 - Rs.5,000 per student per year) targets Tier-1 private schools (DPS, Modern, Ryan, Bombay Scottish, Inventure-class). Elite is the highest-leverage move because the buyers are already paying Microsoft / Google Rs.10 lakh+ per year for white-glove relationships.

Tier	Per student per year (Rs.)	What's in it	Status
Starter	500	Student app, teacher dashboard, AI Activity Log, basic analytics.	Live
School (recommended)	1,200	Adds: admin console, full AI misuse detection, parent portal hooks, Google / Microsoft SSO, ERP integrations, lesson plan library.	Live
Premier	2,000	Adds: white-labelling (logo, brand colour, custom domain), capstone portfolio export, board-aligned outcome reports, dedicated faculty hours.	Live
Elite (new)	3,500 - 5,000	Adds: custom AI tutor trained on the school's curriculum (RAG), branded mobile app on iOS / Android, dedicated Customer Success Manager, quarterly principal report and onsite meeting, 90-day first-look access to new features, custom email-from-school-domain.	Build in weeks 1-12

Goal of the next 12 weeks: push 30% of current Premier customers up to Elite (each conversion is a net Rs.1,500-3,000 per student per year) and convert 30% of Starter customers up to School (each conversion is a net Rs.700 per student).

3. Per-Student Add-Ons (sold on top of base subscription)

These modules are the easiest upsell. A school already paying Rs.1,200 per student per year does not blink at adding a Rs.300 module mid-year. Stack three of these and ARPU doubles without a tier upgrade.

Module	Price (Rs. per student per year)	What it does	Build effort
Voldebug Certified Student	500	Annual AI literacy assessment. Generates a graded certificate co-signed by Voldebug and the school. Goes on resumes, college applications. Renews every year.	1 week
Capstone Portfolio Export	300	Year-end PDF portfolio of every student's AI work and reflections. Parents share on WhatsApp - viral marketing for Voldebug.	1 week
Board Exam Prep Pack (Class 10/12)	400	AI-tutor-driven CBSE board prep: practice papers, past-year questions, weak-area drills. Premium category.	4-6 weeks
Vernacular AI Tutor (Hindi/Tamil/Telugu)	200	Same product, regional language. Tier-2/3 cities unlock.	3-4 weeks
AI Accessibility Pack	150	Read-aloud, dyslexia-friendly fonts, voice input. Inclusive-ed state grants often cover this.	2 weeks

If a School-tier school adds Certified Student + Capstone + Board Prep: Rs.1,200 base + Rs.500 + Rs.300 + Rs.400 = **Rs.2,400 per student per year. ARPU 2x.**

4. Per-Teacher Products (services-led, high margin)

This is Voldebug's strongest moat. The faculty arm already visits schools - productising that work converts existing services into predictable, recurring product revenue.

Product	Price (Rs.)	What it is
Voldebug Certified AI Teacher (PD program)	15,000 - 25,000 per teacher per year	6-month structured teacher training and final certification. Schools include this in CBSE inspection compliance reports. At Rs.15,000 x 30 teachers per school = Rs.4.5 lakh per school per year just from teacher development.
Faculty visit days	15,000 - 30,000 per day	In-person faculty workshops at the school. Already happening - productise into 1 / 3 / 6-day packages.
Curriculum mapping consultancy	50,000 - 2,00,000 one-time	Map the school's full syllabus to Voldebug lesson plans + create custom plans where needed. Big-school project.
Teacher content marketplace	30% commission	Teachers in one school sell their lesson plans / prompts to teachers in other schools through Voldebug. Network effects, marketplace dynamics, recurring revenue share.

5. One-Time / Event-Based Revenue

Schools love big moments. Charge per event - it bypasses procurement cycles and creates emotional buy-in.

Event	Pricing	Notes
Inter-school AI Olympiad	Rs.500 per student entry + Rs.25,000 per school registration	Quarterly. Top schools love being on the leaderboard. Add corporate sponsorships (Rs.2-5 lakh per Olympiad).
Annual Voldebug Awards	Rs.50,000 - 1,00,000 per school sponsorship slot	Yearbook-photo-worthy event. Corporates pay for brand association.
AI Showcase Day	Rs.25,000 per school	Half-day at the school where students present capstone projects to parents. Boosts parent engagement and word-of-mouth.
Parent Workshop	Rs.15,000 per session (+ Rs.500 per family direct)	One-day parent education on AI use at home. Revenue split between school and Voldebug.

6. Metered / Usage-Based Revenue

Once the real LLM proxy is wired (Voldebug Chat already proxies through a swappable provider; OpenAI / Anthropic API keys are the only blocker), Voldebug can mark up tokens. Schools see a single monthly invoice - they do not benchmark the per-token rate.

Resource	Cost basis	Voldebug charge	Margin
OpenAI / Anthropic tokens (Voldebug Chat)	~Rs.0.50 per 1,000 tokens	Rs.2 included; overflow at Rs.3 per 1,000	5x markup
Premium model access (GPT-4o, Claude Opus)	Rs.2 per 1,000	Rs.6 per 1,000	3x markup
File storage above 5 GB per student	Rs.0.10 per GB per month (R2)	Rs.2 per GB per month	20x markup
AI image generation	Rs.2 per image	Rs.10 per image	Useful for art class, project posters
Voice transcription (lecture recording -> notes)	Rs.1.50 per minute	Rs.5 per minute	Schools record lectures, students get AI summaries

7. Adjacent Revenue Streams

Money beyond the school's direct subscription. Each one is independent and can be turned on without affecting the core product.

Stream	Pricing	Why it works
Parent App Premium	Rs.100 per family per month	Real-time tracking, WhatsApp digests, parent-AI guide. Direct B2C revenue routed through the school.
Career Pathways AI (Class 9-12 only)	Rs.300 per student per year	College recommender, internship matching, scholarship database based on the student's AI activity profile - their first proof of AI literacy.
CSR / Corporate Sponsorship	Rs.10 - 50 lakh per partner	Wipro, Infosys, TCS, Reliance Foundation pay to fund Voldebug at government schools. Their CSR budget = Voldebug's revenue. Huge category in India.
Government / B2G	Rs.50 lakh - 5 crore per state contract	Karnataka (KSEAB), Telangana, Andhra Pradesh run AI initiatives. Get on their RFP lists.
Job board for Class 12 students	Free to student, paid by employer	Companies pay to access AI-literate Class 12 grads for internships and training. Network effect grows with student volume.
Voldebug Academy (alumni-tutor)	Rs.2,000 per tutor sign-up + 20% per booking	Past students earn money tutoring younger ones via Voldebug. Self-perpetuating supply of teachers + retention loop.

8. Compliance and Data Products

Boring on the surface, but schools pay top dollar because regulators leave them no choice. All four products below wrap data Voldebug already collects - low engineering effort, premium pricing.

Product	Price (Rs. per school per year)	Why
DPDP compliance dashboard (audit log + PDF export)	50,000	Digital Personal Data Protection Act 2023 is now law. Schools are scrambling. Voldebug already has the audit logs - this product wraps them in a compliance UI plus a PDF report for the regulator.
NEP 2020 alignment scorecard	30,000	Required for state government funding. Maps school activities to NEP outcomes.
CBSE inspection helper	25,000 per inspection	One-pager listing 'AI integration evidence' for CBSE inspectors. Pure document generation.
Annual student-records archive (FERPA-style)	20,000	All student activity into an encrypted long-term archive. Legal-team peace of mind.

9. 12-Week Build Order

Sequenced by revenue-per-engineering-week. Each line is a shippable, measurable deliverable.

Weeks	Build	Revenue unlocked
1 - 2	Capstone Portfolio Export Generates a year-end PDF for every student from the existing AI log + submission data. Reportlab template, school logo, parent-shareable.	Rs.300 per student per year add-on. Viral marketing because parents share on WhatsApp.
3 - 4	Voldebug Certified Student Assessment engine (multiple-choice + short-answer + AI-graded), scoring rubric, certificate PDF, recurring annual flow.	Rs.500 per student per year recurring. Prestige-driven, students want it, parents pay for it.
5 - 6	DPDP Compliance Dashboard Wraps the existing security_audit_logs + parental_consent tables in a compliance UI. PDF audit-trail export for DPDP regulator filings.	Rs.50,000 per school per year. High-margin, low-effort, urgent (DPDP Act is now law).
7 - 8	Branded Mobile App (Premier / Elite tier) Capacitor wrapper of the existing Next.js web app. Per-school splash, app-store listing template, push notifications.	Pushes 30% of School-tier customers up to Premier (net ~Rs.800 per student per year).
9 - 10	Real LLM Proxy + Token Markup Replace the StubProvider in chat.provider.ts with OpenAIProvider + AnthropicProvider. Per-school usage tracking and monthly invoice line.	5x markup on every Voldebug Chat message. Pure recurring revenue - the only blocker is API key acquisition.
11 - 12	Inter-school AI Olympiad MVP Cross-school leaderboard, registration flow, scoring dashboard. Run a Q1 pilot with 5-10 partner schools.	Rs.500 per student entry x 1,000 students = Rs.5 lakh per Olympiad + Rs.25,000 per school registration + corporate sponsorship slots.

Discipline note: each two-week block ships ONE thing. Concurrent multi-track builds add coordination overhead and stretch the calendar. Two weeks per deliverable maps cleanly to a fortnightly demo cadence with the design partner schools.

10. The 5-Minute Demo That Closes a School

When pitching to a Tier-1 principal, run this exact sequence. Every step is already live at aischool.voldebug.com.

Step	What to do	What the principal sees / feels
1	Log in as a student. Open Voldebug Chat. Type: 'Write me a 500-word essay on the French Revolution'	Instant flag: suspicious_prompt with reason in plain English. Student is told why - transparency, not surveillance.
2	Switch to teacher account. Open the student's submission for that assignment.	Integrity card on the grading page shows the prompt + flag. Teacher can grade with full context.
3	Switch to principal. Open AI Integrity feed.	Real-time school-wide flagged activity, drillable by student.
4	Open Lesson Plan Library. Pick a CBSE Class 10 plan. Click 'Use this plan.'	Ready-to-publish assignment in one click, with the right AI tool pre-selected.
5	Open AI Prompt Library. Filter by Class 10 + CBSE + History.	Curriculum-aligned prompts with copy-to-clipboard. Teachers see immediate value.

Close line: 'No other platform shows the prompt, not just the output. We are the only credible answer to the cheating question.'

11. Risks and Mitigations

Risk	Likelihood	Mitigation
School cancels mid-year because cost rises with add-ons.	Medium	Bundle add-ons into annual contracts up-front. Discount stacking. Annual ARPU contract beats monthly churn risk.
OpenAI / Anthropic outage breaks Voldebug Chat.	Medium	Stub provider already in place. Multi-provider fallback in chat.provider.ts. Schools see graceful degradation, not a 500 error.
DPDP audit reveals a gap.	Low	DPDP foundation already shipped (parental consent, audit log writes on sensitive actions, school-scoped data isolation). Quarterly internal compliance review.
A competitor copies the AI-misuse-detection feature.	High over 12 months	Moat is not the rules - it's the cross-student dedup signal (unique to Voldebug at scale) plus the prompt visibility (no other tool sees prompts). Keep shipping detection rules; consider patent filing.
Faculty arm cannot scale with school growth.	Medium-high	Productise faculty work into the Certified AI Teacher PD program (week 13+). Train teachers once, they then deliver in their school.
Tier-1 schools push back on the Elite tier price.	Medium	Anchor with the Custom AI Tutor + branded mobile app + Customer Success Manager combination. Compare to what they pay Microsoft / Google (Rs.10 lakh+ per year) for less education-specific value.

12. Recommended Next Steps (this week)

Three actions to start immediately. Each is independent and non-blocking.

Action	Owner	By when
Pick the FIRST add-on to build. Recommendation: Capstone Portfolio Export - 1 week effort, immediate parent virality.	Meet	Day 1
Acquire OpenAI API key (or Anthropic). Required for the real LLM proxy in week 9-10. Set up billing limits.	Meet	Day 3
Identify 3 Tier-1 design-partner schools willing to upgrade to Elite at a 25% discount in exchange for a 6-month case study. Aim for one CBSE, one ICSE, one IB.	Sales / Meet	Week 1
Draft the Certified Student assessment rubric (50 questions across AI literacy, ethics, and tool use). Faculty arm authors.	Faculty	Week 2
Schedule a Voldebug AI Olympiad pilot for end of Q2. Five partner schools, 100 students each. Free entry, case study in exchange.	Sales + Operations	Week 4

Success metric to watch: ARPU per existing school. Target is a 2x increase in 90 days driven by add-on adoption (not by new logos).

Appendix - Live Product Inventory (April 2026)

What is already in production at <https://aischool.voldebug.com> as of the date of this plan. This is the foundation each monetisation feature builds on.

Surface	Status
Student dashboard, AI Chat, AI Activity Log, Lesson Plan library, Prompt library, Tools library, Submissions, Scoreboard, Profile	Live
Teacher dashboard, Classes, Create Assignment, Grading interface (with AI integrity tab), Class Analytics, Class Integrity feed, Students roster, Per-student profile, Lesson Plan author UI	Live
Principal dashboard, Audit logs, School-wide AI Integrity feed, Outcome reports, Teacher performance, AI Heatmap	Live
Admin dashboard, User management (with single-user invite), Class management (with create), Tool catalog (CRUD), School settings, Bulk roster CSV import, Plan and billing	Live
DPDP parental consent flow, Security audit log, Per-route rate limiting, MIME / size validation on uploads, MinIO presigned upload flow, AI integrity detection (4 rules)	Live
LLM provider (Voldebug Chat)	Stub - swap to OpenAI / Anthropic in week 9-10
Email and WhatsApp delivery (consent, grades, parent digest)	URLs returned by API; sender wiring is week 13+
School logo / brand colour upload	Schema placeholder - week 7-8 alongside branded mobile app
Razorpay billing automation	Manual mailto for now; week 13+
